FINE PACKAGING

Here at MereCi, we take great pride in providing high quality, bespoke and luxury materials sourced from the finest mills in the world. The products manufactured with our materials require care. We've put together this guide to help prevent issues with our materials and give advice on what to do if something ever happens to the product.

Caring for your woven cover material product is essential to preserve its beauty and longevity. Whether it's a handcrafted book cover or luxury packaging, here are some tips:

- **Avoid Liquids:** Never put any liquid on the material. If you notice fingerprints, gently clean them with a dry microfiber cloth using feather-light pressure. Rub in a circular motion, but don't press too hard or rub for too long to avoid damaging the fibers.
- **Storage:** Store your final product in a cool, dry place away from direct sunlight. Extreme temperatures and humidity can affect the material, binding and finishing over time. Please just do not leave the product on the windowsill, in the trunk of a car, or anywhere else that exposes it to extreme conditions. Ideal conditions are temperatures between 55°F- 90°F and humidity between 5%-60%.
- **Handle with Care:** When handling the material, be gentle. Avoid bending the material or applying excessive force. If you notice any loose threads, trim them carefully, do not pull or tug at threads.
- **Avoid Sharp Objects:** Keep sharp objects away from the material. These materials are durable, but they can still get snagged or scratched.
- **Dust Regularly:** Dust the product periodically using a soft brush or a lint-free cloth. This helps maintain its appearance.
- **Use a piece of scotch tape or a can of compressed air to remove dust particles, specks, and other types of marks on the material.**

Remember, each product made from these materials is unique, and the care instructions may vary slightly. If you have a specific finish or technique used by the manufacturer of your product, check their website or packaging for any additional care recommendations.
